

“Mind over Metal” participants will learn that manufacturing is an exciting and viable career. Through fun, high-energy experiential learning, participants will acquire machining and welding skills by creating projects using state of the art equipment. According to the Report of the Governor’s Community College Advisory Council, Maine has a serious shortage of skilled workers in virtually every major industry. This summer camp experience is a stepping stone to an education leading to a manufacturing career. Camp participants will discover that they can succeed when given the tools and training to do so.

Activities Includes:

- Tour of a machine shop and a welding Facility.
- Machine Shop Projects
- Weld Shop Projects
- Group Service Learning Projects
- Guest Speakers
